

ABSTRACT OF THE DISCLOSURE

A polymer insulator apparatus 11 is constructed by arranging and connecting a plurality of polymer post insulators 1 in parallel, whereby the strength in the direction of arrangement of the polymer post insulators 1 is increased. In mounting the polymer insulator apparatus 11 in the horizontal direction onto a supporting structure 13, the polymer insulator apparatus 11 is mounted so that the direction of parallel arrangement and connection of the polymer post insulators 1 will be the vertical direction. With the polymer post insulator apparatus and the method of mounting the insulator apparatus, the strength in an arbitrary direction can be increased, and the apparatus can save space for mounting.
